- Update product cost and price via excel for existing products

| Online Store

Create a fully integrated online storefront where customers can browse products, place orders, and shop anytime. Inventory, pricing, promotions, and customer data sync automatically with the POS system in real time.

Online Order Management:

Manage and process online orders efficiently from a centralized system. Track order status, fulfillment, and delivery while maintaining complete control through the POS platform.

Online Customers Management:

Maintain a centralized customer database with access to profiles, purchase history, loyalty information, and shopping behavior across both online and in-store channels.

Multiple branch:

Manage all store locations from a single platform. Monitor sales, inventory, staff, and operations across multiple branches with centralized control and reporting.

Customer display screen:

Improve checkout transparency with a customer-facing display that shows items, prices, discounts, totals, and payment details in real time.

Sales Management

- Complete sales control:
Add, edit, delete, and view sales
- Import sales via csv file
- Flexible payment handling:
Add, edit, and delete payments
- Export sales data to pdf and excel
- Download individual sales in pdf format
- Send sales notifications via email, SMS, or WhatsApp
- Warranty and guarantee dates on sales

Purchase Management

- Complete purchase workflow:
Create, edit, view, and delete purchases
- Manage payment transactions:
Add, edit, and delete payments
- Export purchase records to pdf and excel
- Download purchase invoices in pdf format
- Email and sms purchase documents directly from the system
- Bulk import purchases using excel files

Returns Management

- Efficient handling of return requests: add, edit, delete, and view
- Manage return payments: add, edit, and delete adjustments
- Export return records to pdf and excel
- Download return documents in pdf format
- Send return pdfs via email instantly
